REUSE, RECYCLE,  
ROLLBACK, ROLLOUT –  
REMARKETING

# REMARKETING: YOUR USED EQUIPMENT IS IN THE BEST HANDS

## ROLLBACK AND ROLLOUT

We aim to alleviate any concerns you may have about the remarketing process right from the start of the process. Simply arrange a date that is convenient for you and we will collect all your old assets and transport them safely to our technology centre. We can offer this service in line with your rollout of the new equipment to guarantee a smooth transition between rollback and rollout.

## REMARKETING

We are one of Europe's largest and best-known remarketers of used IT equipment having been in the industry for over 40 years. Our experience and size allows us to influence the market price, which enables us to offer our customers more competitive pricing at the front end. Our experts are on hand to help you unlock your old assets true value.

## RECYCLING

We pride ourselves on the fact that we will collect all assets regardless of their condition. While we try to reuse and resell all equipment we have been tasked with collecting, inevitably some of the assets we receive back must be recycled. In this instance we make sure that all equipment we dispose of is done in accordance with WEEE directives and certification will be provided for any assets disposed of on your behalf.

## SECURE DATA ERASURE

Here at CHG-MERIDIAN, we provide certified data erasure at various levels depending on your organisational requirements. Using the data deletion service Blancco, which is approved by the National Cyber Security Centre (NCSC) and BSI, we can validate the deletion of your data from your assets. Our data erasure service exceeds current standards for the permanent erasure of digital information and uses techniques that stop both software and hardware recovery tools from restoring the erased data.

## ENVIRONMENTALLY FRIENDLY

- We have a zero waste to landfill policy
- We have a route to market for 95% of our assets
- Sometimes the assets we receive back are obsolete. In this instance, we strive to recycle and break down parts wherever possible according to WEEE regulations
- Our warehouse uses natural and renewable energy sources such as solar energy and biomass fuel to ensure our low carbon footprint
